

THE UNIVERSITY OF CHICAGO INSTITUTE FOR POLITICAL ECONOMY AND POLITICAL GOVERNANCE

Our research focuses on the political economy of economic development, the political economy of public provision of social services, and the political economy of political institutions. We study how political institutions and processes shape economic outcomes, and how economic outcomes shape political institutions and processes. Our research is interdisciplinary, drawing on political science, economics, sociology, and anthropology. We are particularly interested in the role of the state, the role of the market, and the role of civil society. We also study the political economy of social movements, the political economy of corruption, and the political economy of inequality.

Our research is conducted through a variety of methods, including fieldwork, surveys, experiments, and archival research. We are particularly interested in understanding the political economy of economic development, the political economy of public provision of social services, and the political economy of political institutions. We study how political institutions and processes shape economic outcomes, and how economic outcomes shape political institutions and processes.
